

## **2022 Website Disclosure**

We raised \$89,897 this year to help support our program services. Thank you so much for your generous support. We couldn't do it without your help.

Deb Violette, Board President attended several lung cancer research conferences throughout the year via video conferencing and face to face. Some of the meetings included International Association for the Study of Lung Cancer, American Society of Clinical Oncologist, LungSPORE Maine Lung Cancer coalition and Genentech.

One radon air system was installed. We helped two families with medical, transportation and housing.

The board discussed and agreed that the financial impact that COVID-19 has had on our community has reduced our income from grants, event fundraising and general fundraising ability. The release of funding will be discussed as events unfold throughout the year. We have money set aside to continue our radon program and early lung cancer screening program. We also have funding set aside for our next lung cancer research program.
